

Noam Favier

Software Engineer · Systems Architect · AI Tooling Specialist

About me

Full-stack engineer specializing in local-first AI, real-time processing, and high-performance developer tools. Founder of NF Software. I architect systems from scratch—pipelines, agents, CLIs, TUIs, memory graphs, and OS-level tooling.

Personal

Age: 20
Location: Maastricht, NL
Nationality: French

Core Expertise

Local-First Architecture
• Real-Time Systems • AI Agents • DevOps Automation
• TUI/CLI Design • Systems Programming

Tech Stack

Primary: Go, Python, Java, C
Advanced: C++, TypeScript, Lua, Rust, Swift
Tools: Docker, GitHub Actions, Neovim, Bubble Tea, Whisper.cpp, Ollama, OpenGL, Terraform, Tauri

Soft Skills

Discipline (10+ years gymnastics), Team leadership, Technical writing, Product ownership, Full-stack thinking, Creative problem solving, Bodybuilding for 5 years and physically fit

Philosophy

Local-first over cloud. Terminal workflows. Readable architecture beats clever code.

French (C2 - Native)
English (C2)
Spanish (B1)
Italian (B1)
Dutch (A2)

Certifications

TOEFL 106/120
Java, Python, Go (SoloLearn)
AI & DevOps specializations

PROFESSIONAL EXPERIENCE

2023–Present	Founder & Lead Engineer · NF Software · Maastricht, NL Architected Iris, an on-device voice AI assistant (Go, wake word to STT to LLM to TTS). Built Iskra, a Git automation CLI succeeding Zvezda. Developed Setka, a real-time network flow visualizer (Go, libpcap, WebSocket), and NF-ToolBox, a Go license server with Stripe billing on Postgres. Full ownership: systems design, AI pipelines, UI/UX, DevOps, product direction.
2024–2025	Software Engineer · Freelance · Remote Delivered custom LLM pipelines, automation tools, and local-first AI solutions for clients. Integrated AI workflows into existing infrastructure.

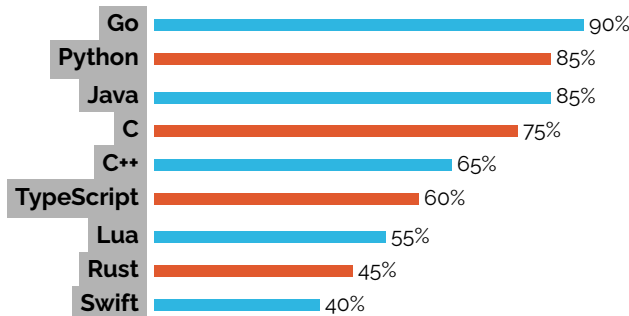

KEY PROJECTS PORTFOLIO

Iris	Local Voice AI Assistant On-device pipeline (wake word → STT → LLM → TTS) in Go, powered by sherpa-onnx, running fully offline on Apple Silicon. No cloud dependency.
Iskra	Git Automation CLI Single Go binary handling AI-generated commit messages, bulk multi-repo sync, and status overviews. Successor to Zvezda, rebuilt for speed and simplicity.
Setka	Network Flow Visualizer Go/libpcap packet capture piped through flow aggregation to a WebSocket-driven live browser dashboard. Functional end-to-end capture, enrichment, and streaming pipeline.
NF-ToolBox	License Server & CLI Go backend for the NF Software tool line: auth, device activation, and Stripe-powered billing on Postgres, plus a companion CLI and verification SDK.
Zarya.nvim	Neovim Plugin Ecosystem Floating Apple Music control UI for Neovim (track info, playback, Telescope-powered playlist picker), plus a personal IDE-level Neovim configuration and col-orscheme work.

ACADEMIC PROJECTS

2024–Present	Team Lead – Frisian Draught · Maastricht University Leading 5-developer team building Java/JavaFX application with DQN and Minimax AI agents, state management, and multiplayer engine. Implementing reinforcement learning strategies.
2023–2024	Lead Developer – PotPotGolf · Maastricht University Built 3D engine from scratch using Java/LWJGL/OpenGL with physics simulation, HDR lighting, shader pipeline, terrain rendering. Created ML agents for procedural courses with A* pathfinding validation. Won best project award.

PROGRAMMING SKILLS

EDUCATION

42 Paris
Software Engineering · Starting Nov 2026
Admitted after passing the Piscine

BSc Data Science & AI
Maastricht University · 2022–2025

Baccalauréat (Mention Bien)
Lycée Français
20/20 Math, 17/20 Physics
